PROFILE

Ambitious third-year Computer Systems Engineering student at Al-Azhar University, Gaza, driven by a deep passion for modern web development and innovative problem-solving. Proficient in architecting responsive, user-centric applications with React, Next.js, and TypeScript. Possess a solid foundation in computer networks, operating systems, and algorithmic design.

SKILLS

- Frontend: Typescript, React, Next.js, Redux, Framer Motion, GSAP, Tailwind, SASS, HTML, CSS
- Problem-Solving: LeetCode, Data Structures, Algorithms

EDUCATION

Bachelor of Computer Systems Engineering

Faculty of Engineering and Information Technology, Al-Azhar University, Gaza, Palestine

09/2022 – Expected 06/2026

- Currently in my third year, focusing on computer systems, software development, and web technologies.
- Relevant coursework: Programming Fundamentals (Python, JavaScript), Web Development (HTML, CSS, React), Operating Systems, and Artificial Intelligence.
- Contributed to academic projects, including developing a simple web application and simulating process scheduling algorithms.

PROJECTS

VS Code Clone

An application that simulates the VS Code environment using React and TypeScript, with responsive design powered by Tailwind CSS, and state management using Redux Toolkit.

Car Store Website

Developed a responsive e-commerce website for a car store using React and Tailwind CSS, focusing on a clean and user-friendly interface.

Ninja Project

Developed a responsive web application using React, TypeScript, and Tailwind CSS, emphasizing clean code and modern design principles.
